Web Service Viva Questions and Answers

1. What is a web service?

A web service is a software component used for communication between applications over a network.

2. What is the aim of this practical?

To create and consume a simple web service in a distributed application.

3. What is the purpose of a web service?

It allows different applications and systems to exchange information.

4. What are the components of a web service architecture?

- Service Provider
 - Service Requestor (Consumer)
-

5. What is a Service Provider?

A service provider creates and publishes the web service.

6. What is a Service Consumer?

A service consumer uses the web service by sending requests.

7. What is SOAP?

SOAP (Simple Object Access Protocol) is a protocol used for exchanging XML-based messages in web services.

8. What is WSDL?

WSDL stands for Web Services Description Language.
It describes the web service methods and operations.

9. What is IIS?

IIS (Internet Information Services) is a Microsoft web server used to host web services.

10. What is the extension used for .NET web services?

.asmx

11. What is the purpose of [WebMethod]?

It exposes a method as a web service.

Example:

[WebMethod]

12. What are the methods used in the example web service?

- Add()
 - SayHello()
-

13. What does the Add() method do?

It adds two integer numbers.

14. What does the SayHello() method return?

It returns:

Hello World

15. What is ASP.NET?

ASP.NET is a framework used to build web applications and web services.

16. What is a proxy in web services?

A proxy acts as an intermediary between client application and web service.

17. Why is a proxy needed?

It handles communication with the web service automatically.

18. Which utility is used to generate a proxy?

WSDL utility

19. What is the command to generate a proxy?

WSDL http://localhost/MyWebServices/FirstService.asmx?WSDL

20. What is XML?

XML (Extensible Markup Language) is used to exchange structured data.

21. What is the role of virtual directory in IIS?

It stores and hosts the web service files.

22. What is localhost?

localhost refers to the current local machine.

23. What is distributed application?

A distributed application runs across multiple systems connected through a network.

24. What is the role of Internet Explorer in this practical?

It is used to test the web service.

25. What happens if the web server stops?

The client application throws a runtime exception.

26. What is the difference between web service provider and consumer?

Provider	Consumer
Publishes service	Uses service
Hosts web methods	Sends requests

27. What is the purpose of Console.WriteLine() in WinApp?

It displays service results on console.

28. What is interoperability in web services?

Interoperability means different applications can communicate regardless of platform or language.

29. What is the outcome of this practical?

Web services can be published on intranet or internet.

30. What is the final result of this practical?

Successfully created a simple web service and distributed application.
